Understanding the Risks of Holding Stablecoins

What businesses holding stablecoins need to know about cover

Continuum

Who's Holding Stablecoins

More corporate treasuries, payment platforms and fintechs are moving money through stablecoins.

- **Faster, cheaper cross-border settlement**
- **Round-the-clock payments**
- **A growing share sitting on the balance sheet**

But these aren't cash, and the cover behind them hasn't caught up.

Continuum

Not Quite Cash

Stablecoins move like money but carry risks cash never did

They can be hacked or stolen

Payments can be misdirected

They sit in wallets and with custodians

New risks call for cover built for them.

Continuum

Theft and Fraud

The biggest risk is the simplest: someone takes what isn't theirs.

- Stolen or hacked coins
- Scams and fraudulent transfers
- Dishonest insiders

Crime insurance is built for this.

Continuum

Storing the Coins

Holding stablecoins means keeping them somewhere safe.

- Coins held in custody
- Keys in cold storage
- Loss, theft, or damage at the custodian

Specie insurance covers this

Continuum

Systems and Hacks

The technology around your coins is a target too.

- Hacks and ransomware
- Data breaches
- System outages

Cyber insurance covers this

Continuum

Cover That Keeps Up

Insure stablecoins for what they are, not what they resemble.

We help businesses match their cover to the way they actually hold and move digital assets.
