

The Deepfake Era of Cyber Crime

In early 2024, a Hong Kong finance employee at Arup wired out US\$25 million after a video call with a deepfaked CFO. This is now the shape of the attack.

AI-Generated Video And Audio

Deepfake video and audio are now indistinguishable from real executives. A single call. A wire instruction. Millions transferred.

AI generates convincing video and voice of CFO

Real-time deepfake video calls, not just audio

Victim has no way to verify authenticity during call

**The attack looks legitimate.
Your team can't tell the difference.**

Multi-Participant Deepfake Meetings

Single deepfake calls were suspicious. Now attackers create multi-participant meetings with deepfaked executives, board members, and advisors. Consensus through deception.

Multiple deepfaked participants in single meeting

Creates false consensus for wire transfers

Harder to spot when "everyone" agrees

**Multiple fake executives on one call.
Your employee believes the meeting was real.**

Personalised Phishing At Machine Speed

Before the deepfake call comes personalised phishing. AI scans company infrastructure, LinkedIn, email headers, org charts. The attack is built around your specific vulnerabilities.

AI-generated phishing targeting specific employees

Messages reference real company details and relationships

Phishing happens hours before the deepfake call

**The attack is built for your company specifically.
Traditional phishing defences miss it.**

AI-Scanned Company Infrastructure

AI survey tools map your entire company infrastructure. Vendors, systems, access controls, banking relationships. The attacker has a complete picture before they call.

Automated scanning of company IT infrastructure

Vendor relationships and banking details identified

Insider knowledge without insider access

**The attacker has done their homework.
They know exactly what to ask for.**

Size your Cyber Cover to what the Outage Costs

A deepfaked CFO convinces your finance team to wire millions. The attacker looked real. The meeting felt legitimate. But which insurance policy responds when the loss isn't a breach, theft, or traditional fraud?

**Deepfakes are reshaping cyber crime.
Your insurance needs to reshape too.
Contact Continuum to review your coverage.**
